## **CMYK Distributors to Showcase InkZone Ink-Presetting & Closed-Loop Technology and Double-sided Preproofer at Graph Expo 2011**

*Visit Digital Information Booth #439 to witness InkZone Ink Presets and Closed Loop Technology and the Preproofer in action and learn how these innovative products can save time, money, and the environment*

Weymouth, MA- September 7, 2011 – CMYK Distributors, Inc. is delighted to announce that they will be showcasing the revolutionary InkZone product line and the double-sided Preproofer in the Digital Information Booth #439 at Graph Expo 2011 in Chicago, IL from September 11 – 14, 2011. CMYK Distributors, Inc. is the exclusive distributor of Digital Information products in the United States and the leading distributor and installer of graphics and printing products that bring automation and waste reduction technology to the industry.

CMYK Distributors looks forward to supporting Digital Information as they present newly-integrated support for the Heidelberg Prinect Press Center® with the InkZone product family of ink-presets and closed-loop color control solutions. Thanks to this new interface for the Prinect Press Center®, practically any sheetfed offset press from Heidelberg can be connected to InkZone. This new extension to the Digital Information product line will be introduced for the first time at Graph Expo 2011 and will be available during Q4 of 2011.

In addition, the latest version of Digital Information's Preproofer will be in action, delivering double-sided, imposed proofs using a tandem of uniquely-configured Epson large-format, inkjet printers. Unlike booklet proof solutions, which can only refer to single, isolated PDF pages and never to an imposed and RIPed print form as a whole, a Preproofer printout which has been printed on both sides in just one pass can easily be folded and checked for correct page sequence.

“CMYK Distributors looks forward to welcoming Graph Expo 2011 attendees to visit us at the Digital Information Booth #439 to see first-hand the many advantages of the InkZone product line,” said Mark Williams, Executive Director of Sales for CMYK Distributors. “Digital Information’s InkZone ink-presetting and closed-loop solutions are unparalleled in the industry and the Preproofer is truly groundbreaking as the fastest, most accurate, and cost-effective double-sided proofer on the market.”

As many successful printers worldwide have already discovered, InkZone is an open platform ink preset and closed-loop color control solution which harmonizes perfectly with all offset litho presses from leading manufacturers like Komori, KBA, Heidelberg, Mitsubishi, Ryobi, Manroland, and almost all others. By integrating InkZone, printers can realize substantially shorter makeready time and a reduction in paper waste, paired with considerably-improved color quality. With InkZone, official color standards for offset printing can easily be met, and the whole range of print run processes can be kept more consistent while also being logged for certification, QA reporting or customer verification.

**About Digital Information**

Digital Information. was founded in 1990 in Switzerland by Michael Haenni and Christoph Bugs, both IT specialists with a background in media. Today, the company is internationally recognized in the graphics industry for the quality and ROI of its ink-presets and closed-loop technology products. In close collaboration with a growing number of partners, Digital Information develops and produces software and hardware based solutions for the graphics industry. With several thousand installed licenses, DI-Plot has become a standard name in the graphics industry. The InkZone product line, launched by Digital Information in 2001, has enabled commercial printers to integrate their existing and new presses into their digital networks.
