Graph Expo 2014 NEWS ALERT:

CMYK Distributors Announces U.S. Unveiling of SpectroPocket™ for Android™ – the World’s First Solution for Measuring Color with Smartphones and Tablet Computers

Weymouth, MA- (September 22, 2014) – CMYK Distributors, Inc. today announces the U.S. premiere of Digital Information’s all new SpectroPocket for Android, the world’s first system for measuring discrete color patches on different substrates using commercially available spectrophotometry and displaying the recorded color values on any mobile Android device, at Graph Expo 2014, McCormick Place, Chicago, September 28 – October 1, 2014, Booths 973 & 974.

Prior to the release of the all new SpectroPocket, PC hardware and operating systems such as MS Windows or Mac OS restricted flexibility and mobility when measuring color. The introduction of Digital Information’s SpectroPocket for Android represents a great stride in the portability and functionality of color measurement technology. For the first time, it is possible for smartphones or tablet computers to connect directly to scanning spectrophotometers via an external USB interface. Users can now measure color virtually anywhere with lightweight equipment—on-site at a customer facility, in the office, at the laboratory, on press— or, wherever your business takes you.

SpectroPocket for Android is a compact, portable, box-shaped device with integrated software and rechargeable USB battery which connects directly to the spectral measuring device via USB. Communication between the SpectroPocket and the mobile Android device is transferred via Bluetooth technology. Spectral values are then interpreted and displayed on the Android smartphone or tablet computer using an Android App.

All display modes necessary can be viewed on the Android device: spectral remission values as figures and curves, as well as LAB, density, XYZ and RGB values. Color differences between two measurements are shown as Delta E. Perfect color densities derived from spectral measurements are calculated by the BestMatch function. For further use on the web or in the Cloud, the entire series of measurements can be easily exported or imported as standard CxF™ (Color Exchange Format) format files, or transmitted to another Android device. Currently, SpectroPocket for Android supports the i1Pro™, i1Pro 2, and ColorMunki™ Design scanning spectrophotometers from X-Rite.

The cost-effectiveness of purchasing the complete SpectroPocket for Android solution bundle including the SpectroPocket hardware and software, supported scanning spectrophotometer, Android-enabled device, and SpectroPocket App represents a significant savings over the purchase of far more costly portable measuring instruments currently available on the market.

Looking ahead, Digital Information will be launching SpectroPocket Report, an Internet-based database. Evolving from Digital Information's world-class InkZone Report, SpectroPocket Report is a color database developed to enable customers to view and manage the color data from their SpectroPocket on the web.

Please visit CMYK Distributors and Digital Information at Graph Expo 2014 in Chicago, IL from September 28 – October 1, 2014 to be one of the first in the United States to witness a demonstration of the all new SpectroPocket for Android™.

SpectroPocket for Android™ Technical Specifications:

- Supports i1Pro, i1Pro 2 and ColorMunki Design from X-Rite via USB.
- Runs on Android from version 4.1
- Delta E calculated from CIE 1976, CIE 2000, CIE 1994 and CMC 2:1

SpectroPocket for Android™ will be available in the fourth quarter of 2014.

Android is a trademark of Google, Inc. SpectroPocket is a registered trademark of Digital Information Ltd. Colormunki, i1, and Eye-One are registered trademarks of X-Rite.
